

# Kaplan Lab of Genome Structure & Function

Available positions: **Postdoc / student / lab manager**

Our research group, at the Technion Faculty of Medicine (near Bat Galim train station), uses a combination of advanced computational and experimental methods to study the profound connection between genetic information and its physical organization.

**Our goal is to decipher how the genome encodes its 3D organization, and how this organization mediates biological function.**

We are seeking excellent postdocs and students of all backgrounds, as well as a lab manager, excited about experimental and theoretical/computational genomic research.
